

Hamcrest with junit

Much older implementation of matchers library. In junit 4 there is some decent integration for that...

JUnit 4 had assertions that can take Hamcrest matchers.

JUnit 5 asks you to use that independently....

```
<dependency>
  <groupId>org.hamcrest</groupId>
  <artifactId>hamcrest-library</artifactId>
  <version>1.3</version>
  <scope>test</scope>
</dependency>
```

```
assertThat("Key West",is(owner.getCity()));
```

```
import static org.hamcrest.MatcherAssert.assertThat;
import static org.hamcrest.Matchers.is;
```
