

AssertJ

Can be used with JUnit.

AssertJ is an independent library designed to provide a more fluent and expressive way to write assertions in Java unit tests. It provides a rich set of assertion methods that allow you to verify conditions in your test cases with a clear and concise syntax.

However, AssertJ can be used alongside JUnit to enhance the assertion capabilities in your tests.

```
<dependency>  
  <groupId>org.assertj</groupId>  
  <artifactId>assertj-core</artifactId>  
  <version>3.24.2</version>  
  <scope>test</scope>  
</dependency>
```

```
assertThat(controller.index()).isEqualTo("index");
```

```
import static org.assertj.core.api.Assertions.assertThat;
```
