

Configure Master Password

Mvn `—encrypt-master-password <password>`

Then we have to store that in `${user.home}/.m2/settings-security.xml`

```
<settingsSecurity>
<master>.....</master>
</settingsSecurity>
```

We can keep the password on other removable drive:

```
<settingsSecurity>
<relocation>.....</relocation>
</settingsSecurity>
```

This ensures that encryption will happen only when the usb drive is mounted by os.
