Verify interactions with Mockito Mocks

```
void deleteById() {
    service.deleteById(1l);
    verify(specialtyRepository).deleteById(1l);
}
```

We are verifying that deleteById has been called once... for multiple times we can use :

```
@Test
void deleteById() {
    service.deleteById(1l);
    service.deleteById(1l);
    verify(specialtyRepository,times(2)).deleteById(1l);
}
```

Specifying the number of times mock should be invoked.
Controlling how many interactions mock receive...
